

A dashboard of contracts they uploaded.

For each contract:

Overview tab: key info and risk summary.

Risk Radar tab: clause categories with risk levels.

Q&A tab: chat interface for asking questions.

Comparison tab: only when they upload a second version.

Dates tab: upcoming renewal/notice deadlines with reminder settings. make a. figma. for this how this shall look

Here's a clear blueprint you can directly translate into Figma – frame structure, layout, and components for every screen.

1. Overall structure

Create 2 main desktop frames in Figma (1440×900):

1. “Contracts Dashboard” – list of all contracts.
2. “Contract Detail” – same frame with tabbed content (Overview / Risk Radar / Q&A / Comparison / Dates).

Use modern CLM dashboards as visual reference: left sidebar, top bar, cards and tables, clear status + dates. ^[1] ^[2] ^[3].

2. Contracts Dashboard screen

Frame: 1440×900 – Name: Contracts Dashboard

Layout

- Left sidebar (fixed width ~240 px)
 - Logo at top (simple wordmark).
 - Navigation:
 - Dashboard
 - Contracts
 - Templates (future)
 - Settings
 - Bottom: user avatar + name.

- **Top bar (height ~64 px, full width excluding sidebar)**
 - Left: Page title: “Contracts”.
 - Center: search input “Search contracts by name, counterparty...”
 - Right: “+ New Contract” primary button.
- **Main content area (rest of space)**
 - Section header row:
 - “All Contracts” (title)
 - Filters: dropdowns (Status, Type, Risk) + Date range.
 - **Table of contracts (card or table-style)**
Columns:
 - Contract Name
 - Counterparty
 - Type (SaaS, NDA, Lease...)
 - Status (Uploaded, Analyzed, Needs Attention)
 - Overall Risk (badge: Low / Medium / High, colored pill)
 - Next Key Date (Renewal / Notice date)
 - Actions (View, Compare)

Each row click → navigates to Contract Detail screen for that contract.

3. Contract Detail base layout (shared by all tabs)

Frame: 1440×900 – Name: Contract Detail

Top section

- **Breadcrumbs (top left):** Contracts > ACME – SaaS Subscription
- **Main title:** ACME – SaaS Subscription Agreement
- **Under title: small metadata line:**
 - Type: SaaS
 - Counterparty: ACME Inc.
 - Status: Analyzed
 - Uploaded: 10 Jun 2026
- **Right side of header:**
 - Overall Risk pill (e.g., red “High Risk”)
 - Small text: “Last analyzed: 5 minutes ago”
 - Button: “Re-analyze”

Tabs row (below header)

Horizontal tab bar:

- Overview
- Risk Radar
- Q&A
- Comparison
- Dates

Use standard tab UI: active tab has bottom border and bold label.

Main content area

Under tabs, the content changes per tab; keep a consistent padding grid (e.g., 24 px).

4. Overview tab – key info + quick risks

Layout:

- **Left column (~60% width) – Summary cards**
 - Card 1: “Summary”
 - Paragraph: 2–3 bullet points:
 - “Initial term: 12 months, auto-renews annually.”
 - “Liability cap: 12 months of fees; excludes indirect damages.”
 - “Termination: no termination for convenience; only for cause.”
 - Card 2: “Top Risks”
 - List of 3–5 risk items with icons:
 - Red icon: “Auto-renew with 30-day notice window.”
 - Red icon: “No termination for convenience.”
 - Yellow icon: “Unlimited liability for data breaches.”
- **Right column (~40% width) – Info panel**
 - Card: “Contract Info”
 - Labels + values:
 - Effective Date
 - Initial Term End
 - Auto-renew: Yes/No
 - Notice Period: 30 days
 - Jurisdiction
 - Card: “Next Key Date”

- Big date (e.g., “Mar 12, 2027”)
- Caption: “Last day to send non-renewal notice.”

This tab gives a high-level snapshot similar to CLM overview dashboards that show status and key metrics. ^[4] ^[5]

5. Risk Radar tab – clause categories with risk levels

Layout:

- Top row:
 - Left: Title “Risk Radar”
 - Right: Filter dropdown: [All | High | Medium | Low].
- Risk radar grid (2×3 or 3×2 cards) – each card = category:
Example cards:
 - Term & Renewal
 - Termination
 - Payment & Fees
 - Liability & Indemnity
 - Data & Privacy
 - IP & Confidentiality

Each card shows:

- Category name
- Risk level badge (Low / Medium / High) with color
- 2–3 bullet highlights, e.g.:
 - “Auto-renew every 12 months; 30-day notice.”
 - “Termination only for material breach with 15-day cure period.”

Click on a card → slide-out panel from right:

- Title: “Termination – High Risk”
- Section: “Why it’s risky” (short explanation).
- Section: “Clauses” – list of clause snippets with:
 - Clause label (“Clause 5.1 – Termination for Cause”)
 - “View full text” link → opens a modal showing the full clause paragraph.

Design inspiration: real-time risk dashboards in CLM solutions, which group risks by category and highlight severity. ^[3] ^[6]

6. Q&A tab – chat interface

Layout:

- Left side (70% width): Chat pane
 - At top: explanatory text: “Ask questions about this contract. Answers are based only on the contract text.”
 - Chat bubbles:
 - User bubble (right aligned, blue)
 - AI bubble (left aligned, grey/white) with:
 - Plain answer.
 - Underneath: small “Sources: Clause 5.2 – Termination; Clause 9.1 – Fees” with clickable links.
 - Bottom: input area:
 - Text field: “Type a question (e.g., ‘What happens if I terminate early?’)”
 - Send button.
- Right side (30% width): “Referenced Clauses” panel
 - When AI answers, this panel shows the list of referenced clauses as mini cards:
 - Clause title
 - Short excerpt (2 lines)
 - “Open in Risk Radar” hyperlink.

This closely matches how modern AI contract review tools present explanations with highlighted deal-breakers and extracted metadata. ^[7] ^[8]

7. Comparison tab – side-by-side contracts

Layout:

- Top bar inside tab:
 - Dropdown “Base Contract: [v1 – Signed 2025]”
 - Dropdown “New Contract: [v2 – Proposed 2026]”
 - Button: “Swap sides”
- Summary strip (full width, at top of content):
 - “Key changes detected:”
 - Chip list:
 - “New auto-renew clause added (High impact)”
 - “Liability cap increased (Medium)”
 - “Notice period shortened (Medium)”

- **Main area: two columns**
 - Left column: **Old Contract (v1)**
 - Scrollable panel listing clauses (one per card).
 - Right column: **New Contract (v2)**
 - Parallel scroll syncing with left.

Each row shows:

- Clause category tag (e.g., Liability)
- A small diff badge:
 - “Unchanged” (green)
 - “Modified” (orange)
 - “New in v2” (blue) / “Removed from v1” (grey).

Click on a clause row → expand both sides to show full texts and a concise AI-generated “Change summary” between them.

8. Dates tab – renewal & reminder management

Layout:

- Left side: “Upcoming Dates” list
 - Cards sorted chronologically:
 - Title: “Non-renewal notice deadline”
 - Date: “Mar 12, 2027”
 - Label: “Critical – Renewal”
 - Toggle: “Reminder ON/OFF”
 - Each card has “Edit reminder” icon → modal for setting X days before.
- Right side: mini timeline
 - Horizontal timeline with:
 - Dot: Effective date
 - Dot: Initial term end
 - Dot: Renewal dates
 - Hover shows details.

Design is similar to CLM dashboards that track expirations and obligations. ^[2] ^[9] ^[5]

9. How to implement this in Figma (step-by-step)

1. Set up styles

- Define color styles: Primary, Background, Border, “Risk High”, “Risk Medium”, “Risk Low”.
- Define text styles: H1, H2, Body, Caption.

2. Build components

- Sidebar component
- Top bar component
- Tab bar component
- Card component (with variants: small, large, with badge)
- Table row component for contracts
- Chat bubble components (user, AI)

3. Create pages/frames

- Page Dashboard → frame Contracts Dashboard.
- Page Contract Detail → frame with tab variants (you can duplicate the base frame and set each tab state: Overview / Risk / Q&A / Comparison / Dates).

4. Prototype

- Link table rows → Contract Detail (Overview tab).
- Link tabs → corresponding frames (Overview → Risk Radar → Q&A etc.).
- Add simple interactions for opening side panels and modals (Figma “Open overlay”).

If you want, I can next:

- Write exact Figma component names and layer hierarchy (so you just follow and build), or
- Help you prioritize which 2 tabs to design first (e.g., Overview + Risk Radar) and make them pixel-perfect before the rest.
